

SOLAREX
Renewable Energy Projects

The business of **ENERGY**

Enjoy the benefits of clean, affordable energy.

OUR SERVICES

ENERGY ANALYSIS

We install monitors and software to log energy use in detail. We use this energy data and your electricity bills to identify where you could save.

SOLAR PV SYSTEM DESIGN

Our engineers use the latest software to design and specify solar PV installations of all sizes.

FINANCIAL MODELLING

We model the project's energy production and costs to work out optimal ROI & payback period.

FINANCING

For larger projects, we can arrange attractive vendor finance options.

PROJECT MANAGEMENT

Fully trained technicians and installation crews make sure your solar installation is done correctly and complies with all the necessary regulations and standards.

SOLAR SYSTEMS THAT SAVE YOU MONEY

Electricity prices are increasing every year, and smart businesses are looking for ways to reduce their energy use and cut costs.

There are many ways to save energy and improve profits. But a properly designed solar system will allow you to maximise the benefits.

Solar costs have plummeted over the last few years. Eskom & Municipalities have issued feed-in schemes that pay for any electricity that a business exports to the grid. PLUS, there are accelerated depreciation allowances on energy projects, so you pay less tax.

And PV systems are almost maintenance-free, lasting for up to 25 years.

Today's solar PV is an excellent investment. It quickly pays for itself, improves the quality of the environment we live in, and increases the bottom line of your business.

But how do I choose an Energy Partner?

Equipment varies considerably in price, functionality and quality, so it is difficult to select the best option for your particular needs. And contractors are sometimes less than reliable.

That is where Solarex can help you. We have been operating in the solar field since 2002, so we have more successful projects under our belt than almost anyone. Experience counts!

The Solarex team includes qualified engineers and electrical technicians, trained in the technology that we use. We only use top quality equipment, and we'll make sure you get exactly what your business needs.

So talk to Solarex. We'll help you get it done.
